Update

6.2.0

qubeSERIES

Release Notes Version 6.2.0

General

- Stability and performance optimizations
- **qubeBOX** update to version 1.2.3
- Improved display of connection quality
- Optimizations in ventilation simulation

---

New interface

- **qube3000** — simulates the Dräger Oxylog 3000 plus

qube3000

SKILLQUBE

qubeCONTROL

- Realistic simulation with a dedicated selection of electrodes and sensors

- Completely modernized CPR dashboard with improved analysis and feedback functions

- Updated logbook
- New notification system for providing relevant status and system information

- Connection indicator (Wi-Fi or peer-to-peer): The connection indicator shows whether the devices are connected directly to each other via Wi-Fi or peer-to-peer and whether the connection is active and stable.

---

qubeC3 & qubeC3T
- Advanced options in the layout editor

---

qubeAED
- Metronome support during the CPR phase

Important note
- When upgrading to version 6.2.0, please ensure that you perform the update on all iPads in use.
- The change also requires an update of the **qubeBOX** firmware to version 1.2.3. To do this, all sensors must be disconnected during the update. Instructions for the update can be found [here](#).
